

1. Cards

You have a normal deck of cards.
When the green flag is clicked, deal 2 random cards. You can just output the card in text form.

2. Maze Game

Draw a Maze on the backdrop (it doesn't matter how good/bad your maze is). Create a sprite which you can control with your arrow keys. Program the sprite so that you return to the starting point if the sprite touches the walls.

3. Platformer Game

Draw a couple of platforms on the backdrop. Program a sprite which you can use left and right arrow to move, and up arrow to jump. Make the sprite able to stand on the platform and the bottom of the screen.
